SUBUNIT: Homodimer (soluble isoform) (By similarity).
SUBCELLULAR LOCATION: Type I membrane protein. Two so
isoforms are also produced by alternative splicing. (
isoform 3/E6, is biologically active, while the other
4/E6Deltal6, is inactive.
ALTERNATIVE PRODUCTS: 4 isoforms; 1/6C (shown here).

-i. FUNCTION: RECEPTOR FOR GABA. THE ACTIVITY OF THIS RECEPTOR IS.

-I. FUNCTION: RECEPTOR FOR GABA. THE ACTIVITY OF THIS RECEPTOR IS.

-I. MEDIATED BY G.-PROTEINS THAT INHLBITS ADENYLYL CYCLASE ACTIVITY,

STIMULATES PHOSPHOLIPASE A2, ACTIVATES POTASSIUM CHANNELS,

INACTIVATES VOLTAGE-DEPENDENT CALCIUM-CHANNELS AND MODULATES

INOSITOL PHOSPHOLIPUS HYDROLYSIS. PLAYS A CRITICAL ROLE IN THE

FINE-TUNING OF INHIBITORY SYNAPTIC TRANSMISSION. PRE-SYNAPTIC

GABA-B-R INHIBIT NEUROTRANSMITER RELEASE BY DOWN REGULATING

GABA-B-R INHIBIT NEUROTRANSMITER RELEASE BY DOWN REGULATING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             receptor 4 supports the GABA(B) heterodimer as the functional receptor.";

T "Functional association of UZ snrnp with the ATP-independent plucesosmal complex E.";

T spliceosomal complex E.";

L Mol. Cell 5:779-787(2000).

C -!- FUNCTION: SUBBNIT OF THE SPLICING FACTOR SF3A REQUIRED FOR 'A'

C COMPLEX ASSEMBLY FORMED BY THE STABLE BINDING OF UZ SNRNP TO THE BRANCHPOINT SEQUENCE (BPS) IN PRE-MRNA. SEQUENCE INDEPENDENT BINDING GF SF3A/SF3B COMPLEX UPSTREAM OF THE BRANCH SITE IS C ESSENTIAL, IT MAY ANCHOR UZ SNRNP TO THE PRE-MRNA. MAY ALSO BE INVOLVED IN THE ASSEMBLY OF THE 'E' COMPLEX.

C -!- SUBUNIT: COMPONENT OF SPLICING FACTOR SF3A WHICH IS COMPOSED OF ASSOCIATES WITH THE SPLICING FACTOR SF3A AND A 12S RNA UNIT TO FORM THE UZ SNALL NUCLEAR RIBONUCLEOPROTEINS COMPLEX (UZ SNRNP).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Zhan M., Zhang G., Chissoe S., Murray J., Miller N., Minx P., Fulton R., Johnson D., Bemis G., Bentley D., Bradshaw H., Bourne S., Cordes M., Du Z., Fulton L., Goela D., Graves T., Hawkins J., Hinds K., Kemp K., Latreille P., Layman D., Ozersky P., Rohlfing T., Scheet P., Walker C., Wamsley A., Wohldmann P., Pepin K., Nelson J., Korf I., Bedell J.A., Hillier L., Mardis E., Waterston R., Wilson R., Emanuel B.S., Shaikh T., Kurahashi H., Saitta S., Budarf M.L., McDermid H.E., Johnson A., Wong A.C.C., Morrow B.E., Edelmann L., Kim U.J., Shizuya H., Simon M.I., Dumanski J.P., Peyrard M., Kedra D. Structure 6:63-73(1998).

-i- FUNCTION: BINNS TO THE FC REGION OF MONOMERIC IMMUNOGLOBULINS GAMMA. MEDIATES THE SELECTIVE UPTAKE OF IGG FROM MILK AND HELPS NEMBORN ANIMALS TO ACQUIRE PASSIVE IMMUNITY. IGG IN THE MILK IS BOUND AT THE APICAL SURFACE OF THE INTESTINAL EPITHELIUM. THE RESULTANT FCRN-IGG COMPLEXES ARE TRANSCYTOSED ACROSS THE INTESTINAL EPITHELIUM AND IGG IS RELEASED FROM FCRN INTO BLOOD C TISSUE FLUIDS (BY SIMILARITY).

-i- SUBUNIT: FCRN COMPLEX CONSIST OF TWO SUBUNITS: P51, AND P14 WHICE INTERPORTURE OF TWO SUBUNITS: P51, AND P14 WHICE OF THE SUBUNITY OF TWO SUBUNITS: P51, AND P14 WHICE OF 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Simister N.E., Mostov K.E.; "Cloning and expression of the neonatal rat intestinal Fc major histocompatibility complex class I antigen homolog."
